Enduro Inkjet 110 Classic 2s is described as ‘tear-resistant, robust and offers best printability.’ Its high folding strength and resistance to wet and tears means it is particularly suitable for maps, technical drawings and similar applications.

It is designed to produce best results with aqueous inkjet printing and dye and pigment inks. The material has also been successfully qualified on HP PageWide XL and is listed in the HP medialocator with its own profile.

Finally, thanks to its multi-layer product structure, the material offers a ‘durable solution and at the same an affordable, eco-friendly and sustainable alternative to fully synthetic media.’ It is PVC-free, FSC certified, and the paper fibres are recoverable through standard paper-recycling processes.
