

ENDURO

Sustainability

SUSTAINABLE - VERSATILE - INNOVATIVE

Sustainability is a key element of Sihl's corporate strategy and an important factor in our success.

Reduction in resource consumption and improvement in the CO₂ balance, workplace safety, training and qualifications, responsible handling of products and social commitment are everyday considerations at Sihl.

Certificates and seals are a reward and confirmation of special achievements in the field of sustainable business management:

- > Certified management systems at Sihl
 - ISO 9001 (Quality management)
 - ISO 14001 (Environmental management)
 - ISO 50001 (Energy management)
 - OHSAS 18001 (Work and health management)
- > FSC® Chain of Custody Certification
- > EcoVadis CSR Silver Medal

The mark of
responsible forestry

Products made of ENDURO are durable and hard-wearing. This is made possible by a special material composite with a core of foil surrounded by two layers of paper. This way ENDURO combines the best properties of paper and foil: It can be processed like paper, printed and written on perfectly. In addition, it is tear-resistant, robust, waterproof and wet tear-resistant.

Sustainability of the existing ENDURO range:

- > **Less film:** ENDURO has a high paper content (depending on application / grade up to 80%) and therefore consists largely of renewable resources. In comparison to fully synthetic media film content is significantly reduced, our goal being to supply no more film than is necessary, and as little as possible!
- > The paper fibres are **recoverable through standard paper-recycling** (except ENDURO Thermal). The film portion can be separated and thermally recycled
- > All ENDURO grades are FSC® certified, i.e. only papers from sustainable forestry are used
- > Sihl uses only chlorine-free bleached papers
- > ENDURO contains no plasticizers
- > PVC- and BPA-free
- > Free of solvents, poisons and heavy metals
- > ENDURO provides durability, ultimately saving resources

Innovation towards greater sustainability:

ENDURO is already a sustainable range, yet we are constantly working on and researching further innovations to make our products even more resource-efficient, e.g. based on renewable raw materials.
