

PRESSURETAC

Goods labelling

PRESSURETAC – the cleverest solution for logistics

The PRESSURETAC-cold-seal adhesive only sticks to itself, therefore requires no release liner and can be removed without leaving any residue. It leaves no trace behind – for a clean and professional appearance.

Optimise your production times, speed up your processing and minimise your costs. PRESSURETAC loops tags are delivered on the roll and can be used immediately: no punching or perforation in the printer is required, if a cutter or perforation knife is used in the thermal printer.

Special benefits:

- > Only sticks to itself – no release liner required
- > Reduced risk of accidents, no slippy release liners to drop on the floor
- > Residue-free removal – no extra cleaning effort needed on crates, trolleys or tension straps
- > „Ready-to-use” for end-users – no punching or perforation needed
- > Variable material strengths for manual and automated application available
- > Environmentally-friendly - FSC® certified and without release liner
- > Resistant to fluctuating temperatures - usable in a wide temperature range (-5°C – +30°C)

		Sort	Weight gsm	Thickness µm	Applications
PRESSURETAC	thermal transfer print	7753 – TT 80	85	80	Loop tags for manual application (i.e. the food industry)
		7755 – TT 120 strong	125	120	Loop tags for automated application (i.e. breweries, drinks industry)
	direct thermal printing	7760 – TOP 80 2.0	88	90	Loop tags for manual application (i.e. the food industry)
		7748 – TOP 120 strong	140	140	Loop tags for automated application (i.e. breweries, drinks industry)
